

Eco Engineering at a Glance

Business Description

Eco Engineering is a national design-build energy services company specializing in providing turnkey lighting system upgrade services. We design and implement energy saving lighting and lighting control projects with compelling financial paybacks. Eco Engineering helps its customers reduce operating and maintenance expenses, boost employee productivity, while positively impacting the environment through reduced energy consumption.

Turnkey Services Provided

- Facility audit and needs assessment
- Lighting and lighting control systems solution design
- Materials procurement
- Installation management
- Material removal and recycling
- Utility incentive and tax credit administration
- Project financing

Typical Project Components

- Lighting technology specific to each installation
- Interior and exterior scope of work areas
- Basic to advanced lighting control technologies
- 3 to 5-year project payback

Industry Expertise

Consumer Goods and Services, Education, Financial and Insurance Services, Freight and Distribution, Government, Healthcare, Industrial, Real Estate, and Retail facilities across North America.

Company History

Eco Engineering was founded in 1993 and today is one of the largest lighting upgrade service providers in the U.S. Since an ownership change in 1998, Eco Engineering has successfully completed more than 3,100 energy efficient lighting projects involving approximately 300 million square feet of facility upgrades. These projects have delivered more than \$750 million in cumulative energy savings to our customers while reducing energy consumption by a combined 8 billion kilowatt hours.

Example Clients

Adidas Group, AT&T, Honeywell, J.C. Penney, Johnson Controls, Kroger Co., Performance Services, Saint-Gobain, Siemens, Trane, among many others.
